Episode 4

Recurrent Neural Networks

Sequential data

- Time series
 - Financial data analysis
 - Demand prediction
 - Predict vehicle breakdown using sensor data
 - Medical sensors e.g. sugar level

- Sound
 - Speech recognition
 - Text to speech
 - Music generation
 - Music recommendation
 - •

- Text
 - Generating tweets, poetry
 - Sentiment analysis
 - See last lecture :)
- Spatio-temporal
 - Video
 - Precipitation maps
 - Ultrasonography

Could go on all day

Natural language as time series

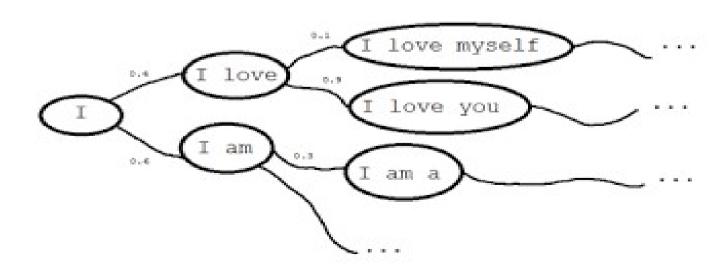

Data:

- Literature
- Conversation
- Tweets
- Book scans
- Speech

Objective:

Learn P(text)

$$P(text) = P(w_0, w_1, ..., w_n) = P(w_0) \cdot P(w_1|w_0) \cdot P(w_2|w_1w_0) \cdot ... \cdot P(w_n|...)$$

Why learning it?

- Detect languages as P(text|language)
- Sentiment analysis P(text|happy)
- Any text analysis you can imagine
- Generate texts!
 - Cool article http://bit.ly/1K610le
 - Generating clickbait: http://bit.ly/21cZM70

Actual distribution

$$P(text) = P(w_0, w_1, ..., w_n) = P(w_0) \cdot P(w_1|w_0) \cdot P(w_2|w_1w_0) \cdot ... \cdot P(w_n|...)$$

Bag of words assumption (independent words)

$$P(text) = P(w_0, w_1, ..., w_n) = P(w_0) \cdot P(w_1) \cdot P(w_2) \cdot ... \cdot P(w_n)$$

Anything better?

Actual distribution

$$P(text) = P(w_0, w_1, ..., w_n) = P(w_0) \cdot P(w_1|w_0) \cdot P(w_2|w_1w_0) \cdot ... \cdot P(w_n|...)$$

• Bag of words assumption (independent words)

$$P(text) = P(w_0, w_1, ..., w_n) = P(w_0) \cdot P(w_1) \cdot P(w_2) \cdot ... \cdot P(w_n)$$

Markov assumption

$$P(text) = P(w_0, w_1, ..., w_n) = P(w_0) \cdot P(w_1|w_0) \cdot P(w_2|w_1) \cdot ... \cdot P(w_n|w_{n-1})$$

GRU

Okay, the gradients no longer vanish except they still do

But how do we deal with exploding grads?

Ideas?

Gradient clipping

At each time tick,

- check if grad abs value is more than ... 5?
- If so, clip it
 - large positive is now 5,
 - large negative -5
- How large is too large?
 - Reduce clipping threshold until explosions disappear

Gradient clipping

Where do I clip?

- Clip each element of $\delta L/\delta w$
- Clip each element of $\delta h_{i+1}/\delta h_i$
- Clip whole $\delta L/\delta w$ by norm
 - If $\left\| \frac{\delta L}{\delta w} \right\| > 5$, scale $\left\| \frac{\delta L}{\delta w} \right\| \left\| \frac{\delta L}{\delta w} \right\| \cdot 5$

Generating stuff

Easy:

- Names, small phrases
- Orthographically correct delirium

Medium:

- Grammatically coherent text
- Resembling particular author

Hard:

- C/C++ source code
- Music
- Organic molecules
- LaTex articles
- Your course projects
